Transforming Primary Mathematics By Mike Askew

'Lively and thought provoking...at a key time in the development of primary mathematics teaching and learning. It offers a very much richer model of mathematics learning than is available to many young learners and has the potential to have a real impact on the way mathematics is taught.' - *Jan Winter, Bristol University, UK*

What is good mathematics teaching? What is mathematics teaching *good for*?
Who is mathematics teaching for?

Under-pinned by findings from the largest research programme into primary mathematics funded in recent years, *Transforming Primary Mathematics* offers a clear, practical approach to implementing fundamental change in curriculum, classroom environment and teaching styles. It offers an inspiring, sometimes controversial, and often unconventional look at the subject of mathematics, by:

- Endorsing the use of a 'new mathematics' – one based on problem solving, modelling and inquiry, not on abstract rules, memorising, and regurgitation
- Arguing that there is more to maths teaching than 'death by a thousand worksheets'
- Challenging norms, such as the practice of sorting children into sets based on their perceived mathematical ability
- Advocating an environment where teachers are encouraged to take risks
- Looking at how best to prepare learners for an unknown future
- Encouraging reflection on teachers' own beliefs and values about mathematics.

Transforming Primary Mathematics is for all primary school teachers who want to make mathematics welcoming, engaging, inclusive and successful.
