The Multiwavelength Atlas of Galaxies By Glen Mackie

Since the radio signature of our own Milky Way was detected in 1931, galaxies have been observed from ultra-high energy gamma rays to long wavelength radio waves, providing fundamental insights into their formation, evolution and structural components. Unveiling the secrets of some of the best-observed galaxies, this atlas contains over 250 full-color images spanning the whole electromagnetic spectrum. The accompanying text explains why we see the component stars, gas and dust through different radiation processes, and describes the telescopes and instruments used. This atlas is a valuable reference resource on galaxies for students seeking an overview of multiwavelength observations and what they tell us, and researchers needing detailed summaries of individual galaxies. An accompanying website, hosted by the author, contains slide shows of the galaxies covered in the book. This is available at www.cambridge.org/9780521620628.

Editorial Review

Review

'In this excellent atlas, Glen Mackie of Swinburne University of Technology, Melbourne, has collected images of familiar and less familiar galaxies at various wavelengths and comparable scales, showing how key features of galactic form and evolution are picked out in cool dust, hot gas and spectral emission, to name but a few.' *Astronomy and Geophysics*

About the Author

Glen Mackie is an astronomer in the Centre for Astrophysics and Supercomputing (CAS), Swinburne University of Technology, Melbourne, Australia, and Coordinator of Swinburne Astronomy Online (SAO). He received a PhD ('The Stellar Content of Central Dominant Galaxies') from the Australian National University in 1990, and has worked at the University of Wisconsin, Madison, the Harvard-Smithsonian Center for Astrophysics, the Carter Observatory and Victoria University of Wellington. His research interests include galaxy formation and evolution, the rich cluster environment, multiwavelength properties of galaxies, large-scale structure, galaxy interactions and mergers and astronomy education and history.

Users Review

From reader reviews:

Leslie Hackett:

As people who live in typically the modest era should be upgrade about what going on or details even knowledge to make all of them keep up with the era which can be always change and progress. Some of you maybe will certainly update themselves by looking at books. It is a good choice in your case but the problems coming to a person is you don't know what one you should start with. This *The Multiwavelength Atlas of Galaxies* is our recommendation so you keep up with the world. Why, because this book serves what you want and need in this era.

Greg Little:

Hey guys, do you wants to finds a new book to learn? May be the book with the subject *The Multiwavelength Atlas of Galaxies* suitable to you? The actual book was written by popular writer in this era. The actual book untitled *The Multiwavelength Atlas of Galaxies* is one of several books this everyone read now. This particular book was inspired a lot of people in the world. When you read this e-book you will enter the new age that you ever know ahead of. The author explained their thought in the simple way, and so all of people can easily to understand the core of this reserve. This book will give you a wide range of information about this world now. To help you to see the represented of the world on this book.

Johanna Bassett:

Often the book *The Multiwavelength Atlas of Galaxies* has a lot details on it. So when you check out this book you can get a lot of help. The book was published by the very famous author. Tom makes some

research before write this book. This book very easy to read you can get the point easily after reading this article book.

Bonnie Vassallo:

This The Multiwavelength Atlas of Galaxies is fresh way for you who has fascination to look for some information given it relief your hunger details. Getting deeper you on it getting knowledge more you know otherwise you who still having bit of digest in reading this The Multiwavelength Atlas of Galaxies can be the light food for yourself because the information inside this kind of book is easy to get simply by anyone. These books create itself in the form that is reachable by anyone, yes I mean in the e-book form. People who think that in book form make them feel tired even dizzy this book is the answer. So there isn't any in reading a guide especially this one. You can find actually looking for. It should be here for you actually. So , don't miss the idea! Just read this e-book variety for your better life along with knowledge.
