## **Electronic Health Records, Second Edition** By Jerome H. Carter

The leading resource for evaluating, purchasing, implementing, and using an electronic health records (EHR) system, this fully revised new edition continues to help even the most technology challenged reader master key concepts. Electronic Health Records, Second Edition is a user-friendly guide, presenting information in a clear and precise manner, providing readers with a solid understanding of what electronic health records are and do. This new edition features a new section on implementation planning, new chapters on decision support, informatics standards, and project management, clear advice on evaluating and selecting systems, and easy to use tables, diagrams, and figures which allow for easy access to information. Divided into two major sections, the first section of the book serves as a tutorial on technological, business, and legal aspects of EHRs. Using a hands-on workbook approach, the second section focuses on the implementation and management of the EHR system. Also included is the latest information on resources, websites, services, and vendors. Written by authors with extensive EHR implementation experience, Electronic Health Records, Second Edition is the most practical and authoritative guide to understanding the many different aspects of an EHR system.

## **Editorial Review**

### **Review**

The quality, safety, and affordability of US health care are serious concerns, and private- and public-sector entities have consistently advocated that an integral part of solving these problems is the adoption and use of electronic health record (EHR) systems. The second edition of *Electronic Health Records: A Guide for Clinicians and Administrators* is useful for anyone undecided about investing in an EHR system or who wishes to gain a comprehensive and up-to-date understanding of the increasing potential and issues associated with EHRs. The book provides sound advice and effectively mixes prose with figures and tables ... an excellent resource for introductory courses on health care systems. Overall, this second edition of *Electronic Health Records* should be a key resource, recommended as a must for the bookshelf or library of persons or organizations contemplating adopting or updating an EHR system. --The Journal of the American Medical Association

A useful, timely compendium of knowledge and advice that will be invaluable to those not already familiar with EMR systems. (Review of first edition) --Journal of Biomedical Informatics

... a thoughtful workbook for individuals or groups planning to implement an electronic medical record system. (Review of first edition) --Mayo Foundation for Medical Education and Research

### **From the Publisher**

The inspiration for this book came from the many clinicians whom I have encountered over the past four years who found themselves in the frustrating position of wanting to implement an electronic medical record (EMR) system and having no idea where to start the process.

This book is an attempt to answer the many questions that arise when implementing an EMR system. As an aid to the reader, the book is divided into two parts. In Part One, the reader will find in-depth discussion of technologies, issues, and processes. When applicable, references for further reading are provided.

Part Two has a different approach. It is designed as a workbook. Here, the goal is to offer practical advice on the actual steps involved in implementing an EMR system. The information provided in its chapters is thoroughly infused with the "hands-on" experience of the authors. Part Two covers the everyday issues of negotiating a contract, evaluating products, understanding practice needs, and planning.

### **About the Author**

Jerome H. Carter, MD, FACP, is Director of Informatics at the 1917 Research Clinic, in the Division of Infectious Diseases of the University of Alabama-Birmingham. He is currently leading multi-year effort to build a true computer-based patient record which supports both patient care and clinical research. In addition to his software development activities, Dr. Carter is Course Director of "Clinical Documentation and Information Systems in Support of Patient Care", offered as part of the Master's Degree program in Health Informatics in the Department of Health Services Administration.

## **Users Review**

### **From reader reviews:**

**Latoya Brown:**
