Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)) By Paul G. Engelkirk Ph.D. MT(ASCP), Janet Duben-Engelkirk EdD MT(ASCP)

Written in a straightforward and engaging style, this premier textbook provides students with the foundation in microbiology that they need to perform their day-to-day duties in a safe and knowledgeable manner. Coverage includes the core themes and concepts outlined for an introductory course by the American Society for Microbiology.

Developed for current and future healthcare professionals, the text offers vital coverage of antibiotics and other antimicrobial agents, epidemiology and public health, hospital-acquired infections, infection control, and the ways in which microorganisms cause disease. This comprehensive new Ninth Edition explores the major viral, bacterial, fungal, and parasitic human diseases, including patient care, and how the body protects itself from pathogens and infectious diseases.

A bound-in CD-ROM and a companion Website include case studies, additional self-assessment exercises, plus animations and special features that provide additional insight and fun facts on selected topics.

Editorial Review

Review

-- "I especially liked the tables - they're good summaries of important facts about the diseases, the causative agents and sometimes the treatment modalities. The anatomy drawings are very good -- and again serve as a good reference for other courses. I like the artwork depicting infectious disease and immunizations and illness in general that are the book. Sometimes these are the things a student will remember!" -- "Thus length does matter. Too much information leads to overwhelming students as much as too little information stupefies them. I believe that your author has hit a happy medium." -- "Although I would recommend that the text be covered in its numbered sequence, the book is written so that each individual instructor (or student for that matter) can adjust the order of the material."

Users Review

From reader reviews:

Nora Carter:

Book is usually written, printed, or outlined for everything. You can recognize everything you want by a guide. Book has a different type. We all know that that book is important thing to bring us around the world. Alongside that you can your reading ability was fluently. A guide Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)) will make you to always be smarter. You can feel considerably more confidence if you can know about anything. But some of you think this open or reading a new book make you bored. It's not make you fun. Why they could be thought like that? Have you looking for best book or ideal book with you?

Kimberly Hopkins:

Book is to be different for each and every grade. Book for children until eventually adult are different content. As we know that book is very important for all of us. The book Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)) was making you to know about other know-how and of course you can take more information. It is quite advantages for you. The e-book Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)) is not only giving you far more new information but also to become your friend when you sense bored. You can spend your time to read your reserve. Try to make relationship with all the book Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)). You never experience lose out for everything should you read some books.

Daniel Rhoads:

As people who live in the actual modest era should be revise about what going on or information even knowledge to make these people keep up with the era that is always change and progress. Some of you

maybe may update themselves by looking at books. It is a good choice for you but the problems coming to you is you don't know which you should start with. This Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)) is our recommendation to cause you to keep up with the world. Why, because book serves what you want and want in this era.

Donna Muniz:

People live in this new morning of lifestyle always attempt to and must have the time or they will get great deal of stress from both lifestyle and work. So , once we ask do people have time, we will say absolutely of course. People is human not really a robot. Then we question again, what kind of activity do you have when the spare time coming to anyone of course your answer can unlimited right. Then do you ever try this one, reading guides. It can be your alternative throughout spending your spare time, the book you have read is definitely Burton's Microbiology for the Health Sciences (Microbiology for the Health Sciences (Burton)).
