Graph Mining: Laws, Tools, and Case Studies (Synthesis Lectures on Data Mining and Knowledge Discovery) By Deepayan Chakrabarti, Christos Faloutsos

What does the Web look like? How can we find patterns, communities, outliers, in a social network? Which are the most central nodes in a network? These are the questions that motivate this work. Networks and graphs appear in many diverse settings, for example in social networks, computer-communication networks (intrusion detection, traffic management), protein-protein interaction networks in biology, document-text bipartite graphs in text retrieval, person-account graphs in financial fraud detection, and others.

In this work, first we list several surprising patterns that real graphs tend to follow. Then we give a detailed list of generators that try to mirror these patterns. Generators are important, because they can help with "what if" scenarios, extrapolations, and anonymization. Then we provide a list of powerful tools for graph analysis, and specifically spectral methods (Singular Value Decomposition (SVD)), tensors, and case studies like the famous "pageRank" algorithm and the "HITS" algorithm for ranking web search results. Finally, we conclude with a survey of tools and observations from related fields like sociology, which provide complementary viewpoints.

Table of Contents: Introduction / Patterns in Static Graphs / Patterns in Evolving Graphs / Patterns in Weighted Graphs / Discussion: The Structure of Specific Graphs / Discussion: Power Laws and Deviations / Summary of Patterns / Graph Generators / Preferential Attachment and Variants / Incorporating Geographical Information / The RMat / Graph Generation by Kronecker Multiplication / Summary and Practitioner's Guide / SVD, Random Walks, and Tensors / Tensors / Community Detection / Influence/Virus Propagation and Immunization / Case Studies / Social Networks / Other Related Work / Conclusions

From reader reviews:

Esther Price:

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite guide and reading a e-book. Beside you can solve your trouble; you can add your knowledge by the publication entitled Graph Mining: Laws, Tools, and Case Studies (Synthesis Lectures on Data Mining and Knowledge Discovery). Try to make book Graph Mining: Laws, Tools, and Case Studies (Synthesis Lectures on Data Mining and Knowledge Discovery) as your buddy. It means that it can to be your friend when you experience alone and beside regarding course make you smarter than ever before. Yeah, it is very fortunated for you. The book makes you a lot more confidence because you can know everything by the book. So , let's make new experience and knowledge with this book.

Steven Kilgore:

In this 21st one hundred year, people become competitive in most way. By being competitive at this point, people have do something to make these survives, being in the middle of typically the crowded place and notice by surrounding. One thing that at times many people have underestimated this for a while is reading. That's why, by reading a reserve your ability to survive enhance then having chance to endure than other is high. For you who want to start reading any book, we give you this Graph Mining: Laws, Tools, and Case Studies (Synthesis Lectures on Data Mining and Knowledge Discovery) book as basic and daily reading publication. Why, because this book is greater than just a book.

John Jones:

Reading a book for being new life style in this year; every people loves to study a book. When you learn a book you can get a lot of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. If you want to get information about your analysis, you can read education books, but if you act like you want to entertain yourself read a fiction books, such us novel, comics, and also soon. The Graph Mining: Laws, Tools, and Case Studies (Synthesis Lectures on Data Mining and Knowledge Discovery) will give you new experience in reading a book.

Anthony Bankston:

Reading a reserve make you to get more knowledge from it. You can take knowledge and information from a book. Book is composed or printed or highlighted from each source that filled update of news. With this

modern era like today, many ways to get information are available for you actually. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, story and comic. You can add your understanding by that book. Are you ready to spend your spare time to open your book? Or just seeking the Graph Mining: Laws, Tools, and Case Studies (Synthesis Lectures on Data Mining and Knowledge Discovery) when you required it?
