**From Real to Complex Analysis (Springer Undergraduate Mathematics Series)** By R. H. Dyer, D. E. Edmunds

The purpose of this book is to provide an integrated course in real and complex analysis for those who have already taken a preliminary course in real analysis. It particularly emphasises the interplay between analysis and topology.

Beginning with the theory of the Riemann integral (and its improper extension) on the real line, the fundamentals of metric spaces are then developed, with special attention being paid to connectedness, simple connectedness and various forms of homotopy. The final chapter develops the theory of complex analysis, in which emphasis is placed on the argument, the winding number, and a general (homology) version of Cauchy's theorem which is proved using the approach due to Dixon.

Special features are the inclusion of proofs of Montel's theorem, the Riemann mapping theorem and the Jordan curve theorem that arise naturally from the earlier development. Extensive exercises are included in each of the chapters, detailed solutions of the majority of which are given at the end. *From Real to Complex Analysis* is aimed at senior undergraduates and beginning graduate students in mathematics. It offers a sound grounding in analysis; in particular, it gives a solid base in complex analysis from which progress to more advanced topics may be made.

## Editorial Review

### Review

From the book reviews:

“Dyer and Edmunds (both, Univ. of Sussex, UK) developed this work from undergraduate lectures given at the university with the intent of providing an integrated course in real and complex analysis for those who have learned the rudiments of real analysis. Their intentions have been achieved. ... Nearly every section has a collection of exercises. ... Summing Up: Recommended. Upper-division undergraduates and graduate students.” (D. Robbins, Choice, Vol. 52 (3), November, 2014)

“A number of questions which are common, as well as those which are differently explained in real and complex analysis are discussed in the book. The material is presented on fairly rigorous level and illustrated by useful examples. The reader could improve his/her understanding of several notions of real and complex analysis studying the book. The series of exercises are useful in this sense too.” (Sergei V. Rogosin, zbMATH, Vol. 1296, 2014)

### From the Back Cover

The purpose of this book is to provide an integrated course in real and complex analysis for those who have already taken a preliminary course in real analysis. It particularly emphasises the interplay between analysis and topology.

Beginning with the theory of the Riemann integral (and its improper extension) on the real line, the fundamentals of metric spaces are then developed, with special attention being paid to connectedness, simple connectedness and various forms of homotopy. The final chapter develops the theory of complex analysis, in which emphasis is placed on the argument, the winding number, and a general (homology) version of Cauchy's theorem which is proved using the approach due to Dixon.

Special features are the inclusion of proofs of Montel's theorem, the Riemann mapping theorem and the Jordan curve theorem that arise naturally from the earlier development. Extensive exercises are included in each of the chapters, detailed solutions of the majority of which are given at the end. *From Real to Complex Analysis* is aimed at senior undergraduates and beginning graduate students in mathematics. It offers a sound grounding in analysis; in particular, it gives a solid base in complex analysis from which progress to more advanced topics may be made.

### About the Author

Both authors taught at the University of Sussex for many years. Robin Dyer's main research contributions are to the theory of the Navier-Stokes equations; those of David Edmunds lie in functional analysis, interpolation theory and function spaces.

## Users Review

### From reader reviews:

#### Eunice Randle:

What do you about book? It is not important together with you? Or just adding material when you want something to explain what yours problem? How about your time? Or are you busy particular person? If you don't have spare time to do others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? Everybody has many questions above. They have to answer that question mainly because just their can do in which. It said that about publication. Book is familiar in each person. Yes, it is appropriate. Because start from on jardín de infancia until university need this From Real to Complex Analysis (Springer Undergraduate Mathematics Series) to read.

#### Jeremy Bryant:

Now a day folks who Living in the era exactly where everything reachable by connect with the internet and the resources in it can be true or not call for people to be aware of each facts they get. How people have to be smart in receiving any information nowadays? Of course the answer is reading a book. Reading through a book can help folks out of this uncertainty Information mainly this From Real to Complex Analysis (Springer Undergraduate Mathematics Series) book because this book offers you rich data and knowledge. Of course the information in this book hundred per cent guarantees there is no doubt in it you may already know.

#### Douglas Anderson:

This From Real to Complex Analysis (Springer Undergraduate Mathematics Series) are generally reliable for you who want to be described as a successful person, why. The key reason why of this From Real to Complex Analysis (Springer Undergraduate Mathematics Series) can be one of several great books you must have is usually giving you more than just simple looking at food but feed a person with information that probably will shock your earlier knowledge. This book is actually handy, you can bring it everywhere you go and whenever your conditions in the e-book and printed types. Beside that this From Real to Complex Analysis (Springer Undergraduate Mathematics Series) giving you an enormous of experience for example rich vocabulary, giving you demo of critical thinking that could it useful in your day pastime. So , let's have it appreciate reading.

#### Sandra Easley:

Your reading 6th sense will not betray a person, why because this From Real to Complex Analysis (Springer Undergraduate Mathematics Series) reserve written by well-known writer who knows well how to make book which can be understand by anyone who all read the book. Written with good manner for you, leaking every ideas and publishing skill only for eliminate your hunger then you still question From Real to Complex Analysis (Springer Undergraduate Mathematics Series) as good book but not only by the cover but also from the content. This is one book that can break don't judge book by its protect, so do you still needing an additional sixth sense to pick that!? Oh come on your looking at sixth sense already alerted you so why you

have to listening to a different sixth sense.
