There is a major need in the 3D community for educational material that demonstrates detailed techniques for achieving this organic reality. Maya is one of the main packages used on such cutting-edge films, and has an established toolset for creating believable 3D characters. *Maya Character Creation: Modeling and Animation Controls* is designed to take you through the process of designing, modeling, and setting up animation controls for complex 3D characters. The concepts, techniques, and Maya tools used for each step in the process are presented in each chapter, followed by many hands-on exercises. NURBS, polygon, and subdivision surface modeling techniques are shown for creating the character's skin, and skeleton-based animation controls are covered in detail. You will learn how a character's skin should deform when the skeletal joints and muscles move. Advanced MEL scripted animation controls are also covered extensively.
